DETAILED ACTION

Allowable Subject Matter

1. Claims 55-61, 64-89 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art shows a micro mechanical resonator comprising a resonator beam having a first end and a second end, the resonator beam suspended above a substrate by the first end and the second end; providing a lever arm (cantilever), being connected to a bending truss and to the first end of the resonator beam; and using an actuator force to the lever to apply strain onto the resonator beam. Wherein, the actuation force supplied by the actuator proportional to a temperature and a tensile strain is applied to the resonator beam as the temperature increases.

However, Prior art fails to show an actuator to apply an actuation force to the lever arm to apply strain onto the resonator beam wherein, the position on the lever arm where the first end of the resonator beam is connected and where the actuation force is applied are on the same side of the pivot. Prior art also fails to show an actuator to apply an actuation force to the lever arm to apply strain onto the resonator beam wherein, the position on the lever arm where the first end of the resonator beam is connected and where the actuation force is applied are on the opposite sides of the pivot.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
